

# THE POWERHOUSE, INC.

Long known for our dependable and highly efficient motors, The Power House, Inc. manufactures surface aeration equipment for pond sizes of .1 to 1.5 acres. Whether used in fish pond cultures or recreational ponds, we have units ranging in size from ½

hp to 1 hp in both single and dual propeller designs for high oxygen transfer.

Proper use of our aerators prevents fish stress and mortality, increases growth rate, reduces feed costs, removes carbon dioxide, and prevents algae growth. And operating costs of our aerators are far lower than those of most other aeration units.

Sometimes the appearance of the pond is as important as the need for the efficient aeration. For these instances, we offer two models of display aerators. The F500F ½ hp is 4' high and 15' in diameter, and offers large even, globlets of spray in a v-shaped pattern. It is even able to operate in only 16" of water depth. The F1000F 1 hp has a similarly shaped visually pleasing shape 6' high and 21' in diameter. The pattern produced is comparable to many of the larger fountain units on the market, but uses less than half the electrical power.
